

Bulk Abrasive Blasting Systems

Schmidt® abrasive blasting equipment is the safest, most durable, dependable and productive in the industry. These high productivity blasting systems feature multi-outlet thompson Valve II controls that allow each operator independent control of his abrasive media flow. they include the same safety and performance features as other Schmidt abrasive blasters.

Quality valves and controls mean the systems use significantly less abrasive - minimizing downtime, saving on abrasive costs, and requiring less cleanup and disposal. Blasting systems feature Schmidt pneumatic or electric deadman controls, optional remote abrasive cutoff, and normally closed, fail-safe metering and control valves. Portable or stationary blasting systems are available in a range of standard and bulk models to match your application. Custom systems can be designed to meet specific needs.

Standard bulk systems include 120, 160, 500, 650 and 800 cu. ft. models. Optional trailers are available for 120 and 160 cu. ft. systems. Custom designs are available to meet your specific requirements.

- Safest industry design, features normally closed fail safe valves and controls
- Designed to provide the industry's lowest pressure drop, resulting in higher productivity
- Low maintenance design minimizes downtime
- 125 psi ASME code vessel; higher pressure systems available
- Ladder allows easy access to closure
- 10" quick-opening camlock closure requires less maintenance and provides for easier loading
- 12" x 16" manway for easy access
- Full-load lifting eyes for easier transport (not rated for steel abrasives)
- Optional moisture separator for even abrasive flow
